

Problem Statement:

- Create a simple page to display a list of users in a table as shown below.

Name	Id	City	Degree	Timestamp
MoveInSync	1	Bengaluru	Assignment	Mon Apr 12 2021 18:27:19

In the above table, Id should be auto-generated whenever a new user gets added using 'Add User'.. Id should start from 1 and gets incremented every time. Time should be the current timestamp when the new user gets added.

- The table will be empty initially.
- When the user clicks on the "Add User" button, open a form in the popup which asks mentioned details from the user.
 - Name (Text field)
 - City (Dropdown, Values - Bengaluru, Chennai, Delhi, Mumbai)
 - Degree (Text field)
- After clicking the Save button in the form, closes the popup and adds a new entry to the table.
